L. a passione della forma. In ricordo di Marcello Pagani.
In the figure above, the bar graph shows the frequency distribution of different categories. The x-axis represents the category labels, and the y-axis shows the frequency count. Each bar corresponds to a specific category, and the height of the bar indicates its frequency. The data is presented in descending order of frequency, with the most frequent category being at the top and the least frequent at the bottom. The width of each bar is uniform, and the colors used to differentiate the categories are consistent throughout the graph.
